# Looking for a Co-Founder

To build the future of Adventure Sport and travel together.

About Startup:

The Adventure Sports Collective is an attempt to solve some very fundamental and basic problems in the field of adventure travel and sports which have been bottle-necking it's growth ever since the last few decades. Never has been the time more right to solve this problem, now when India is at its youngest with a median age of 27 years, we as a nation are more outgoing than ever and are hungry to explore.

Identified problems:

There is no free flow of information around adventure travel and sports nor do we have a central repository of adventure data.

There is no platform for people to connect over adventure and go on adventures together.

The ecosystem is fragmented and lacks convenience when it comes to finding resources.

We at TASC aims to solve them by building a data-base called MICA and adding various resources layers using AI, ML, VR on it to aid the adventure in India.

We are currently being incubated at IIT Mandi Catalyst and shall go to market towards the end of Q2 2022.

‣ First database on adventure travel .
‣ First adventure based matching app.
‣ Unique team experience ranging from adventure travel to tech to finance.

Joining: Immediate

Compensation: Equity Sharing

What we're looking for

An energetic, passionate, creative, and very hands-on Full-Stack WebXR Developer to join our start-up in the development of our groundbreaking platform.
